

How To Use

You have to configure it from wp-admin > Contact > Add/Edit Contact Forms (Contact Form 7 needs to be activated before) to use this plugin.

You will find a new tab, “2checkout,” along with Form, Mail, Messages, Additional Settings, where you can make all settings related to the 2checkout plugin.

Note: You need to add the “2checkout & 2checkout Country” tag in your form. You will find a tag “2checkout” along with text, email, URL, etc.

To use the 2checkout option, first, you need to create and save form tags.

The screenshot shows the WordPress admin interface for editing a contact form. The '2Checkout' tab is selected and highlighted with a red box. The form editor shows various field tags, with '2Checkout' and '2Checkout Country' also highlighted with red boxes. The status bar at the bottom indicates the form is saved.

You can use the Country field tag option to display country in the drop-down if you are going with the custom approach, you need to set the drop-down value in ISO 3166 (Examples: GB, IE, and DE), so we prefer to use our tag to display country list.

To add the 2Checkout payment form to your Contact Form 7, find the setting attributes given below:

01 Enable 2checkout Payment Form

Check the 2checkout Payment Form option for 2checkout submit button activation.

02 Enable Debug Mode

Check the Enable Debug Mode to start transaction debugging.

03 Payment Mode

This option will allow you to set the Sandbox 2checkout payment process in test mode.

04 **Merchant Code (required)**

This field is required when you want to take payment using 2checkout.
